Fully integrated, state-of-the-art Intruder Alarm and Access Control systems

About Inner Range

Since our inception in 1988, over 80,000 Inner Range systems have been installed in over thirty countries.

Amidst impressive growth, Inner Range has remained focused on what it does best: the integration of intruder alarm and access control functionality.

Consumers are increasingly demanding integrated solutions in the implementation of building management technology. Inner Range equipment delivers an impressive mix of power and flexibility which consistently out performs its more expensive competitors.

Consultants who specify our products, technicians who install them and consumers who use them all benefit on a daily basis from the pursuit of excellence that is the hallmark of Inner Range system design.

Cost effective scalability, programming flexibility, powerful logic and third party compatibility are just some of the compelling reasons to choose an Inner Range solution.

Facts at a glance:

- World leader in integrated intruder, access control and building automation systems
- Established 1988
- More than 80,000 systems sold worldwide in over 30 countries

Concept 4000 / Insight Systems: Seamless Integration of Intruder Alarm and Access Control

Wonderfully powerful as either a state of the art intruder alarm system, or a fully featured access control system, our solution is without peer when the specification calls for seamless integration of these two disciplines.

As an intruder system it sets a new benchmark. Thousands of areas, thousands of inputs and outputs, powerful macro-logic, TCP/IP connectivity and an array of flexible reporting options.

As an access system it offers all of the leading product functionality that you would expect in a state of the art enterprise level solution. Hundreds of thousands of users, multiple card formats, lift control, and module redundancy that will maintain full functionality, even in the event of complete server failure.

A truly worthy contender in either an intruder or access only role, but it is through the integration of these two applications that the system delivers its compelling advantages: Reduced equipment cost, lower installation and maintenance costs, simpler and more practical system management, complementary functionality to name just a few.

Concept hardware coupled with Insight software delivers an unrivalled and truly unique, integrated solution.
